observation mask m
Incomplete series x (NaN = missing) mask m
Gap filling $\tilde{x}$ = linear interpolation
MiniRocket responses $\tilde{C}_k(t)$ on $\tilde{x}$
Window reliability $c(t)$: number of observed taps $w = (c/9)^\gamma$
Weighted PPV $\frac{\sum w\,\mathbb{1}[\tilde{C} > b]}{\sum w}$ (~10k features)
Ridge classifier (LOO-selected penalty)
